Personal information

Surname(s) / First name(s)	**Zanlungo Francesco**
Address(es)	700-0927, Okayama-ken, Okayama-shi, Nishi Furu Matsu, 2-11-6, Japan
Telephone(s)	(+81) 0774-95-1561, (+81) 080-4018-2731
Email(s)	zanlungo@atr.jp, francesco.zanlungo@gmail.com
Nationality(-ies)	Italian, **Holder of Japanese permanent residence permit**
Date of birth	10/03/1976
Gender	Male

Research keywords

Complex Systems Modelling, Crowd Behaviour, Simulations, Robotics

Professional experience

From October 2021	Contract lecturer Okayama University, Okayama, Japan
From April 2021	Lecturer International Professional University of Technology, Osaka, Japan Permanent position
From April 2020	Part time researcher Okayama University, Okayama, Japan Studying the behaviour of pedestrians and robot-pedestrian interactions
April 2017-March 2020	Collaborative researcher Intelligent Robotics and Communication Laboratories, ATR, Kyoto, Japan Studying the behaviour of pedestrians and robot-pedestrian interactions
November 2016-March 2017	Researcher Intelligent Robotics and Communication Laboratories, ATR, Kyoto, Japan Studying the behaviour of pedestrians and robot-pedestrian interactions

2015-2016	Lecturer in Applied Mathematics
	Kingston University, London, UK
	Faculty of Science, Engineering and Computing, School of Computer Science and Mathematics
	Tenured position, resigned to go back to Japan for family related reasons
2009-2015	Researcher
	Intelligent Robotics and Communication Laboratories, ATR, Kyoto, Japan
	Studying the behaviour of pedestrians and robot-pedestrian interactions
November 2008 and September 2009	Visiting researcher
	CPT (Theoretical Physics Center), Marseilles, France
	Collaboration with Prof. Sandro Vaienti
2008	Instructor
	Milan Polytechnic University
	Teaching Introductory course of Mathematics ("College Algebra")
2007-2009	Post-doctoral researcher
	University of Bologna
	Analysis of the effect of random noise and numerical round-off on discrete maps
June-September 2005	Visiting researcher
	Artificial Life Laboratory at Nagoya University
	Collaboration with Prof. Takaya Arita

Journal editing

From August 2018	Area Editor
	Simulation Modelling Practice and Theory, Elsevier

Professional experience outside research

From 2017	Instructor of conversational Italian language
	Japan-Italy Society of Okayama

Education and training

2004-2007	Ph.D. course
Major	Theoretical Physics
Institution	Graduate school of Physics, University of Bologna, Italy
Graduation Thesis	Microscopic Dynamics of Artificial Life Systems, supervised by Prof. Giorgio Turchetti
2003	Japanese language education
Institution	Yamasa Language school, Okazaki-shi, Aichi-ken, Japan
2002	Italian Laurea in Physics
	(The Italian "Laurea" is legally equivalent to a Master degree. To obtain the degree, the candidate was supposed to work on a one year Graduation Thesis project requiring original research.)
Major	Theoretical Physics
Institution	University of Milan, Italy
Graduation Thesis	Studio numerico della cascata ultravioletta nel modello ϕ^4 classico (in Italian), supervised by Prof. Claudio Destri

(*)*Common European Framework of Reference (CEF) level*

(**)*Holder of first (highest) level of Japanese proficiency, approved in 2008*

External funding

2021
Collaborative researcher in the JSPS Kiban-A 18H04121 project *Research and development for mobile HRI and its interaction design theory* (Principal investigator T. Kanda)
Granted by the Japan Society for the Promotion of Science
Budget 2M Japanese Yen

2016
I was, along with two colleagues, part of the Kingston University team that prepared the proposal for the H2020 EU "Monica" project, to which 26 European universities, research centres, industries and public institutions participated. The project has been approved with a budget of 15 million euros, 1 million of them corresponding to the Kingston University unit.

Awards

2016
Awarded a Kingston University Mres studentship (i.e., a fund for a Master student)

Experience in event organisation

2006-2009
In-chief of the organising committee
The Italian workshop on Biophysics (Biophys'06-09), held annually in Arcidosso, Grosseto, Italy.

Computer skills

C, C++, Fortran, Matlab, Mathematica
MS Office, HTML
Latex

Teaching experience

From 2021	Contract Lecturer at Okayama University, Okayama, Japan
	Teaching "Mechanics" (in Japanese)
From 2021	Lecturer at the International Professional University of Technology, Osaka, Japan
	Teaching courses in "Linear Algebra" (in Japanese, starting from 2021/9), "Probability and Statistics" (in Japanese, starting from 2022/4) and Scientific English (starting from 2023/4)
In 2018	Contract Lecturer at Okayama University, Okayama, Japan
	Teaching "Global Studies II"
2016-2017 (Appointed, and prepared lecture notes, before resigning)	Applications of Calculus, Partial Differential Equations module, School of Computer Science and Mathematics, Kingston University
	This undergraduate course introduced the theory of Linear Partial Differential Equations. The course started with an introduction to the geometrical meaning of vector calculus leading to the expression of the Laplace operator in the principal curvilinear coordinate systems. Then the Heat, Wave, Poisson and Schrödinger equations were introduced, along with separation of variables solutions in Cartesian and spherical coordinates.
Course notes	https://www.dropbox.com/s/ja2arlaweqycn8b/notes_prova.pdf?dl=0
2015-2016	Mathematical and Numerical Methods, Numerical Linear Algebra module, School of Computer Science and Mathematics, Kingston University
	This undergraduate course revised the main theoretical concepts of linear algebra (linear systems, vector space, linear operators, vector and matrix norm, contraction theorem, eigenvalues and eigenvectors, matrix diagonalisation), and introduced numerical algorithms for the solution of related problems (Gaussian Elimination, LU decomposition, iterative methods, eigenvalue power method).
Course notes	https://www.dropbox.com/s/z7d28niwldy734m/notes.pdf?dl=0
2015-2016	Mathematical Models and Computation, Programming module, School of Computer Science and Mathematics, Kingston University
	This undergraduate course introduced the fundamental sorting and search algorithms, along with the theoretical concepts necessary for their analysis (algorithm complexity). Part of the course was directed to practical exercitations aimed at acquiring the abilities for performing scientific programming.
2015-2016	Engineering Mathematics and Computing, School of Civil Engineering, Kingston University
	This undergraduate course revised the fundamental concepts of applied calculus (up to ordinary differential equations) and taught how to solve the related problems by Matlab.
2008-2009	Analytical Mechanics, Instructed by Prof. Turchetti and F. Zanlungo, Dep. of Physics, Bologna University
	This course was focused on a throughout analysis of Lagrangian Mechanics (Lagrange equations, symmetries, central field, two body problem, stability, small oscillations, rigid body) and a solid introduction to Hamiltonian dynamics (Hamilton equations, canonical transformations, Noether theorem, integrable systems, Liouville theorem, ergodicity). My task on the course was to give part of the theoretical classes.
2008-2009	Teaching assistant of the Institutions of Mathematics course, Instructed by Prof. Bazzani, Milan Polytechnic University
	An introductory calculus course, focused in particular on the concepts of real numbers, functions, limits and derivation, along with some notions of linear algebra. My task on the course was to give some theoretical classes in absence of Prof. Bazzani, hold practice sessions and prepare examination tests.
2008	Introductory course of Mathematics ("College Algebra"), Milan Polytechnic University
	A course intended for those students that passed the University entry exam but scored poorly in mathematics, focused mainly on the concept of elementary real functions.
2007-2008	Teaching assistant of the Numerical Methods course, Instructed by Profs. Turchetti and Bazzani, Master course in Physics, Bologna University

This course was focused on an introduction of numerical methods for physical sciences (interpolation, numerical solution of non linear equations, numerical integration, numerical solution of differential equations, stochastic systems). My task on the course was to give a few theoretical classes and to assist students during practice sessions.

2007-2008   Teaching assistant of the Complex Systems Laboratory course, Instructed by Dr. Giorgini, Dep. of Physics, Bologna University

For this course, I prepared lectures on genetic algorithms, population dynamics (evolutionary game theory) and neural networks.

Research experience

Crowd dynamics

Mathematical modelling of pedestrian behaviour, crowd dynamics and group behaviour, in collaboration with T. Kanda

In ATR we collected a large amount of data concerning the behaviour of pedestrians in experimental settings and in real world environments, which I used to develop original models of pedestrian and crowd dynamics. More in detail, the major findings regarded:

1. The need to include a velocity dependent potential in a collision avoiding model for pedestrians, and the development of a corresponding mathematical and computational model [12].

2. The improvement of the above model by taking in account the asymmetrical shape of human bodies [19], *(work based on data provided by the Nishinari lab. of Tokyo University).*

3. The development of "Congestion Number", a mathematical tool to asses the state of a human pedestrian crowd [20], *(in collaboration with the Nishinari lab. of Tokyo University)*

4. The tendency of (Japanese) pedestrians to walk on the left side of corridors, and to overtake other pedestrians on the right side, and the development of a method to introduce in a realistic way such a tendency in any pedestrian collision avoidance model [11,38].

5. Large pedestrian groups are not stable, and usually break up in more stable 2 or 3 pedestrian sub-units [36].

6. A mathematical model for the behaviour of social pedestrian groups, which was able to correctly predict the shape and velocity of pedestrian groups in low density, large environments [9].

7. Empirical study and mathematical modelling of how crowd density and other environment features affect the behaviour of pedestrians and in particular of groups [6,7,34,35].

8. How group composition and social roles affect the behaviour of pedestrian groups, and how this information may be used to automatically recognise groups and their composition [1,2,5,23,26,27,33].

9. How gestures affect the behaviour of pedestrian groups [4,29].

10. How the presence of groups affects crowd dynamics [24]

Human-Robot interaction

Socially acceptable mobile robot navigation, in collaboration with T. Kanda

While working at ATR I have been also involved in more engineering oriented works, such as the development of a robot able to smoothly navigate inside a human crowd [8,22,28,30,39,41], and the development of algorithms to automatically detect pedestrian walking goals [37] and pedestrian groups [10,31,40].

Discrete chaotic systems

Analysis of the effect of noise on discrete maps, in collaboration with S. Vaienti and G. Turchetti

Development of a method to find a threshold beyond which the numerical results on chaotic maps are not reliable, and analysis of the differences between the effect of random noise and the effect of numerical round-off on the dynamics of the map [13,14,15].

Evolutionary dynamics of agent systems	*Microscopic Dynamics of Artificial Life Systems (Ph.D. thesis, sup. G. Turchetti, in collaboration with T. Arita)*

Using an approach combining cellular automata or agent models with differential equation (replicator dynamics) models, I studied:

1. The Immune System T cell clonal expansion **[21]**.

2. The relation between the evolution of collision avoidance strategies and the evolution of a *Theory of Mind* **[18,43,44]**.

3. The evolution of "traffic conventions" (such as driving on the left or right side of streets) in a mobility system **[16,45]**.

4. The consequences of the fact that interactions dependent on vision (such as the collision avoidance in crowd dynamics) do not follow the action-reaction law of dynamics **[17,25]**.

Numerical study of statistical properties of relativistic fields	*Numerical study of the ultraviolet cascade in ϕ^4 classical model (Master thesis, sup. C. Destri)*

Using a numerical algorithm that treats time and space in a symmetrical way, preserving thus the relativistic structure of the field theory, and conserving energy at machine precision, I studied the energy diffusion to the higher (ultraviolet) modes of a relativistic scalar field with a quartic interaction term. The results were compared with a more traditional numerical treatment of hyperbolic partial differential equations.

International Conference on the Simulation of adaptive behavior (SAB) 2006, Rome, Italy

49 | F. Zanlungo, G. Turchetti
Dynamics and thermodynamics of a gas of automata
Italian Workshop in Artificial Life (WIVA3), 2006

50 | G. Turchetti, F. Zanlungo
Termodinamica di un gas di automi (in Italian)
Italian Workshop in Artificial Life (WIVA2), 2005, Rome, Italy

51 | G. Turchetti, S. Rambaldi, G. Salustri and F. Zanlungo
Mathematical models of clonal expansion
WSEAS Transactions on Biology and Biomedicine 1, 373-378, 2004

Invited talks

52 | *Pedestrian models: current state and perspectives*
Kyoto University
Kyoto, Japan, 2019

53 | *Pedestrian group behaviour*
Kyoto University
Kyoto, Japan, 2019

54 | *Pedestrian group behaviour*
Alicante University
Alicante, Spain, 2019

55 | *Pedestrian group behaviour*
Polythechnic University of Catalonia
Barcelona, Spain, 2019

56 | *Pedestrian group behaviour*
Symposium on Physics and Psychology of Human Crowd Dynamics
Leiden, Netherlands, 2018

57 | *Pedestrian group behaviour*
Department of Physics of Bologna University
Bologna, Italy, 2018

58 | *Pedestrian group behaviour*
Linnaeus University
Växjö, Sweden, 2018

59 | *Pedestrian group behaviour*
University of Milano Bicocca
Milan, Italy, 2017

60 | *Pedestrian group behaviour*
Tokyo University, Non-linear seminar, Nishinari Laboratory
Tokyo, Japan, 2016

Japanese language papers

70 | 林宏太郎、塩見昌裕、Francesco ZANLUNGO、神田崇行
歩行者モデルを用いた話しかけやすい移動行動
日本ロボット学会第３２回学術講演会講演論文集RJS2014, 3P2-07, 2014

71 | 池田徹志、児堂義弘、Daniel REA、Francesco ZANLUNGO、塩見昌裕、神田崇行
街角における歩行者のサブゴール遷移モデル
日本ロボット学会第３1回学術講演会講演論文集RJS2013, 3I2-03, 2013

72 | 塩見昌裕、Francesco ZANLUNGO、林宏太郎、神田崇行
街角で活動する移動ロボットのための歩行者シミュレータ
日本ロボット学会第第30回学術講演会講演論文集RJS2012, 2N1-8, 2012

73 | 塩見昌裕、Francesco ZANLUNGO、林宏太郎、神田崇行
歩行者モデルを用いた街角でのロボットナビゲーション
日本ロボット学会第第30回学術講演会講演論文集RJS2012, 2N1-8, 2012

Patents

Registered patents

ecvitem1T. Ikeda, F. Zanlungo, T. Miyashita and T. Kanda | *System for the prediction of pedestrian motion and robot control*

（移動予測装置、ロボット制御装置、移動予測プログラムおよび移動予測方法)
Japanese patent 5763384, registered on 19/6/2015

2 | M. Shiomi, T. Kanda, F. Zanlungo and T. Ikeda
A robot able to predict pedestrian motion and perform automatic collision avoidance
（歩行者の軌跡を予測して自己の回避行動を決定するロボット)
Japanese patent 5768273, registered on 3/7/2015
